COHERENCE IQ · NEXION — SECURITY AND TRUST

How Coherence IQ handles data and where the AI models run

Coherence IQ is designed so every outcome can be checked: cited sources, versioned rules, human oversight. Here is what is already defined and what we set together based on the agreed configuration.

How data is processed

Data follows the product's five steps.

- **Agreed sources.** Coherence IQ reads figures and documents only from the sources agreed for the use case.
- **Deterministic checks.** Checks are performed by an engine applying deterministic, versioned rules: same inputs and rule version, same outcome.
- **Linked evidence.** Every outcome points to its sources and to the rule that produced it.
- **Audit trail.** Outcomes, reviews and decisions stay logged and searchable.

Where the AI models run

AI supports reading documents, linking information and explaining outcomes. It does not decide in place of people.

- **Local AI possible.** AI models running locally can be assessed.
- **Deployment options.** SaaS, private cloud or on-premise, to be assessed together.
- **Agreed configuration.** Where models run depends on the chosen deployment option and your security requirements.

Control and human oversight

People stay at the centre of decisions.

- **Human review.** Relevant decisions go through a person, based on configured thresholds and processes.
- **No automatic breach verdicts.** An outcome flags an inconsistency to examine; on its own it does not imply a regulatory breach.

What we define together

These points are not published as general commitments: we agree them in writing for your context.

- Where data is stored and processed
- Retention and deletion periods
- Which AI models are used and where they run
- Privacy roles (controller, processor) and contracts
- Access controls, encryption and your organisation's requirements

This document summarises published information about Coherence IQ. It is not a contractual commitment or a certification: points listed as to be defined are agreed in writing.
